

TRANSCRIPT

A number of tests conducted by the Institut für Potentialforschung in Vienna in 1999 and 2000 with different probands using the PROGNOS system clearly and reproducibly confirmed the effect of products such as the GREEN 8, besides other institutes in different countries with different bio feedback systems based on the electro-acupuncture, according to Dr. Voll (EAV).

The test method is based on the principle that the degree of stress of a body is displayed on a scale of 0 to 100.

The measurement values are taken from several relevant meridian points by means of a stylus.

The 50-55 range is considered neutral (= no stress for the body).

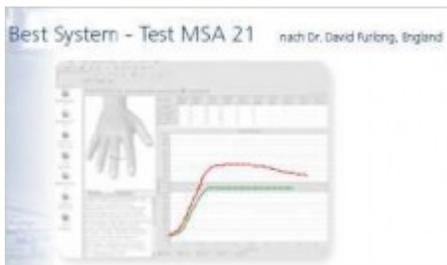

The body's energy status is balanced at this range.

Holding a mobile phone without the GREEN 8 as harmoniser even in stand-by mode shows a significant stress load which is displayed in the 60-70 and higher range on the computer graphic.

All values between 55 and 100 are considered inflammatory processes.
Values under 50 are considered degenerative or chronic processes.

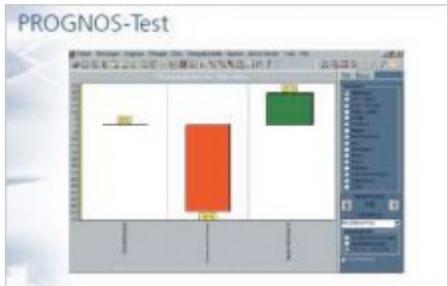

In case of inflammatory processes the body tries to counteract these imbalances - if this is not possible it is indicated by a so-called pointer drop.

A second test with the GREEN 8 foil demonstrates an immediate effect, the graphic line remains in the neutral green range of 50-55 and there is no pointer drop.

Best System - Test MSA 21 according to Dr. David Furlong

The bar graphics show the stress impact with cell phone use in a direct comparison with and without the GREEN 8 FOIL SMALL. First measurement – base measurement 0%

PROGNOS-Test

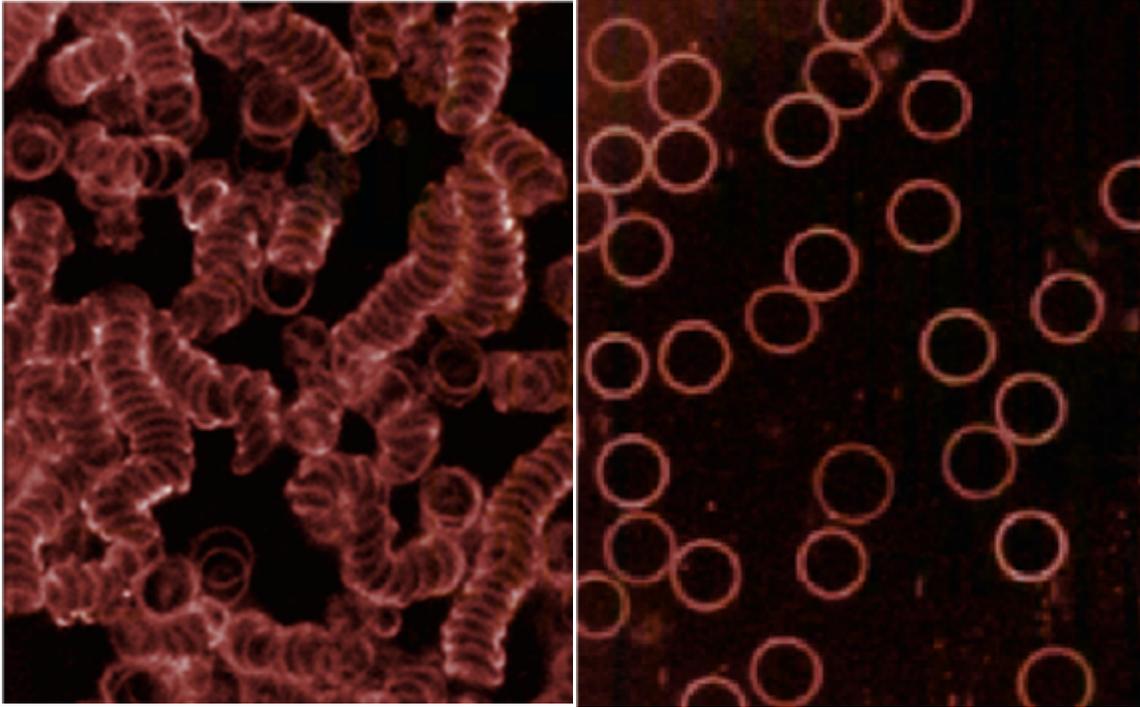

The curves show the stress impact with the use of cell phones with and without the GREEN 8 FOIL SMALL this means that there not only is no stress impact present but positive energy is transmitted as well. (Institut für Potentialforschung – Vienna, Austria 1999)

Dark-field microscope red blood cells

Furthermore, numerous blood tests have confirmed the unique effect of Green 8.

"Rouleaux formation"- No Green 8

The Green 8 effect:

Red blood cell agglutination is noticeable after only 90 seconds of mobile phone use.

No red blood cell agglutination. Even after longer mobile phone use

With a dark-field microscope red blood cells can be visualised. In case of radiation exposure the red blood cells stick together. This is also known as "rouleaux formation". With no radiation exposure the red blood cells move freely and do not agglutinate.
